RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. Original publisher: Silver Spring, Md. : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, National Ocean Service, Center for Operational Oceanographic Products and Services, 2004 OCLC Number: (OCOlc)232298217 Excerpt: . . . Mission Goal 2: CLIMATE Understand climate variability and change to enhance society's ability to plan and respond. Society exists in a highly variable climate system, with conditions changing over the span of seasons, years, decades, and longer. Given such stresses as population growth, drought, increasing demand for fresh water, and emerging infectious diseases, decision makers need a reliable structure and process for receiving accurate, timely, relevant climate information to guide them in managing resources to maximize the benefits and minimize the impacts of climate variations. OUTCOMES (BENEFITS) A monitoring network of appropriately spaced observation stations, all geodetically controlled, will provide links among sea level trends and geodetic reference points. This capability (absolute sea level) will distinguish regional changes in sea level from local land movement. Better science will enhance protection of life and property by providing better information on extreme changes in climate. New warning and guidance tools will be developed. New topo-bathy products will allow better visual representation of coastal climate change. STRATEGIES Monitor and Observe CO-OPS will install more monitoring stations in key areas (high variability) to better resolve differences. CO-OPS will continue to build the U. S coastal component of the Integrated and Sustained Ocean Observing System (IOOS) by partnering with organizations to integrate the NOS backbone components with regional monitoring capabilities. Backbone components include climate quality observations (acceptable data quality and sustainable). Understand and Describe CO-OPS will fully link the observation network to geodesy, requiring close coordination.
