

Integrated Water Resource Management in a Developing Tropical Basin

By Kelly Barbara Schnare

LAP Lambert Academic Publishing Okt 2014, 2014.
Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware -
The participatory approach for Davao city is evaluated
through access to information on a local level, and meaningful
opportunities for engagement. Management as a successful
process requires criteria that are specific and unique to the
grassroots framework, where participants and users are
included in the collection, dissemination, and benefits of the
knowledge and data, that is the co-generation of knowledge in
a practiced, politically recognized, on-the ground reality. The
holistic picture of water balances of the watershed constructed
in this study is a useful interpretation on the basis of best
efforts constructed from the existing statistics, to discuss
secure use of water in a sustainable manner. To demonstrate
the use of water balance, pollution from point and non-point
sources within the watershed are discussed using Total
Maximum Daily Load. The estimated inputs to model
availability and contamination are outlined within this
research to act as suggestions for open-source community
based monitoring efforts. From the process-based research,
the localized data does not have rigorous, representative data
sets which account for appropriate management-level
modeling. 92 pp. Englisch.
